Package 'proPubBills'

October 14, 2022

Version 0.1

Date 2017-11-15

Title 'ProPublica' U.S. Congress Bills API Wrapper

Description An API wrapper around the 'ProPub-
lica' API <https://projects.propublica.org/api-docs/congress-api/> for U.S. Con-
gressional Bills. Users can include their API key, U.S. Congress, branch, and offset ranges, to re-
turn a dataframe of all results within those parameters. This package is different from the 'RPub-
lica' package because it is for the 'ProPublica' U.S. Congress data API, and the 'RPublica' pack-
age is for the Nonprofit Explorer, Forensics, and Free the Files data APIs.

Imports httr, dplyr, stringr

getBills   *Gets the bills depending on U.S.Congress, branch, and offsets*

Description

Gets the bills depending on U.S.Congress, branch, and offsets

Usage

```
getBills(key, congress, branch, type, numFrom, numTo)
```

Arguments

key	is the api key
congress	it the number of the U.S. Congress: for example, 114 for the 114th U.S. Congress
branch	is the House or the Senate branch
type	is the type of bills; options are introduced, updated, active, passed, enacted, vetoed
numFrom	is the offset number beginning range: for example, 1 will get the first 20 bills
numTo	is the offset number to: for example, 40 will get bills 40 to 60. Entering numFrom as 1 and numTo as 40 will return bills 1 to 60

Value

returns a dataframe with all bills and info from the API within the arguments' parameters
