CH	Sep 2010	Updated to support Rev C standards and Doxygen 1.7.0

# 1 Introduction

---

## 1.1 Purpose

This document describes the WonderPro™ Fancy Device (WFD) API. The WFD API provides an interface to some wonderful features.

## 1.2 Scope

This document is intended for software developers who will be using the WFD API.

This document provides the public interfaces necessary to use the features provided by the WFD API. A high-level overview and information on leveraging the interface functionality are also provided.

## 1.3 Conventions

Function declarations, function names, type declarations, and code samples appear in a different font. For example, `#include`.

Code variables appear in angle brackets. For example, `<number>`.

Commands and command variables appear in a different font. For example, **copy a:\*. \* b:**.

Test sentence 7

Test sentence 8

Test sentence 9

Test sentence 10

Test sentence 11

Test sentence 12

Parameter directions are indicated as follows:

- [in] indicates an input parameter.
- [out] indicates an output parameter.
- [in, out] indicates a parameter used for both input and output.

## 1.4 References

Reference documents, which might include Qualcomm documents and non-Qualcomm standards and resources, are listed below:

- *Application Note: Software Glossary for Customers* (CL93-V3077-1)
- *QCT Doxygen Markup Standards* (80-VP989-1)

## 1.5 Technical Assistance

For assistance or clarification on information in this guide, submit a case to Qualcomm CDMA Technologies at <https://support.cdmatech.com>.

If you do not have access to the CDMATech Support Services website, register for access or send email to [support.cdmatech@qualcomm.com](mailto:support.cdmatech@qualcomm.com).

## 1.6 Acronyms

For definitions of terms and abbreviations, refer to the *Application Note: Software Glossary for Customers* (CL93-V3077-1). The following terms are specific to this document.

**Table 1-1 Acronyms**

<b>Acronym</b>	<b>Definition</b>
API	application programming interface.
AR	access rights
WFD	WonderPro™ Fancy Device

# 3 Fancy Device Calibration

---

This is an example of a new chapter created to include all the calibration code.

## 3.1 Sample section

This is a sample section.

### 3.1.1 Sample subsection

This is a sample subsection.

# 4 Deprecated List

---

Global **clk\_regime\_resource\_disable** (clk\_regime\_client\_type client, clk\_regime\_resource\_type resource)

Called when a client no longer requires the use of a particular clock regime resource.

Global **clk\_regime\_resource\_enable** (clk\_regime\_client\_type client, clk\_regime\_resource\_type resource)

Called when a client requires the use of a particular clock regime resource. This function does not support nesting.

Global **clk\_regime\_resource\_required** (clk\_regime\_resource\_type resource)

Checks whether the specified resource is currently required by any clients.

Global **clk\_regime\_resource\_required\_by\_client** (clk\_regime\_client\_type client, clk\_regime\_resource\_type resource)

Checks whether the specified resource is currently required by a specific client.

Global **clk\_regime\_rm\_register\_handler** (clk\_regime\_resource\_type resource, clkrgm\_rm\_handler\_type handler)

Called by target-specific code to register a handler to manage the specified resource. When requests for that resource arrive, this handler is executed.

Global **clk\_regime\_rm\_verbose** (boolean enable)

Sets the resource manager to Verbose mode.

Global **fd\_regime\_resource\_disable** (fd\_regime\_client\_type client, fd\_regime\_resource\_type resource)

Called when a client no longer requires the use of a particular Fancy Device regime resource.

Global **fd\_regime\_resource\_enable** (fd\_regime\_client\_type client, fd\_regime\_resource\_type resource)

Called when a client requires the use of a particular Fancy Device regime resource. This function does not support nesting.

Global **fd\_regime\_resource\_required\_by\_client** (fd\_regime\_client\_type client, fd\_regime\_resource\_type resource)

Checks whether the specified resource is currently required by a specific client.

**Global `fd_regime_rm_register_handler` (`fd_regime_resource_type` resource, `fdrgm_rm_handler_type` handler)**

Called by target-specific code to register a handler to manage the specified resource. When requests for that resource arrive, this handler is executed.

**Global `fd_regime_rm_verbose` (boolean enable)**

Sets the resource manager to Verbose mode.

**Group `second_fancy_device_api`**

Checks whether the specified resource is currently required by any clients.

**Global `test_process_bad_list` (`item_type **bad_list_msg_ptr`, `uint16` msg\_len, `bad_list_pdata_type *sys_bad_list`, `uint32 *security_alert_mask_ptr`, boolean ignore\_expiration)**

Use new interface to process a bad list this is a very long sentence, just to see what this will do when it wraps in the document.

- First item.
- Second item.

**Global `test_process_nice_list` (`item_type **nice_list_msg_ptr`, `uint16` msg\_len, `nice_list_pdata_type *sys_nice_list`, `uint32 *security_alert_mask_ptr`, boolean ignore\_expiration)**

Use the new interface to process a nice list.

# 5 Interfaces

---

## 5.1 WFD APIs

The WFD APIs provide functionality that is truly wonderful. The WFD APIs are merely samples created to generate sample groups in the PDF output. They are not intended to be functional. These sentences all stay together in one paragraph in the PDF as part of the brief description.

### Interfaces

- [First Fancy Device API](#)

*This is a brief description for the First Fancy Device API. This is the detailed description for the first API group.*

- [Second Fancy Device API](#)

*This is a brief description for the Second Fancy Device API. This is the detailed description for the second API group.*

- [Third Fancy Device API](#)

*This is a brief description for the third Fancy Device API. This is the detailed description for the third API group.*

## 5.2 First Fancy Device API

This is a brief description for the First Fancy Device API. This is the detailed description for the first API group.

### Data Structures

- struct [sample1\\_simple\\_struct\\_s](#)
- struct [sample2\\_parent\\_struct\\_with\\_members\\_child\\_struct\\_as\\_member](#)
- struct [sample3\\_struct\\_with\\_two\\_members\\_and\\_declared\\_as\\_variable](#)
- struct [sample4\\_struct\\_with\\_typedef\\_struct\\_member](#)
- struct [sample5\\_struct\\_with\\_define\\_member](#)
- struct [sample6\\_interface\\_desc\\_t](#)
- struct [sample7\\_struct\\_with\\_verbatim\\_comment\\_t](#)
- struct [sample8\\_struct\\_with\\_union\\_member\\_t](#)
- struct [sample9\\_struct\\_sus\\_ad\\_pp\\_eq](#)
- struct [sample10\\_typedef\\_struct\\_with\\_member\\_with\\_bulleted\\_list](#)
- struct [\\_sample11\\_struct\\_sample\\_gtx\\_t](#)
- struct [sample12\\_typedefstruct](#)
- struct [sample13\\_typedef\\_packed\\_struct\\_type](#)
- union [sample14\\_simple\\_union\\_msg\\_type](#)
- union [sample15\\_typedef\\_union\\_u](#)
- union [sample16\\_union\\_with\\_struct\\_members\\_u](#)
- struct [sample17\\_typedef\\_struct\\_type](#)
- struct [oob\\_area\\_info](#)
- struct [local\\_area](#)

### Interfaces

- [Fancy Device Command: Start DMAs](#)  
*This section describes the TP\_PORT\_CMD\_START command.*
- [Fancy Device Command: Stop DMAs](#)  
*This section describes the TP\_PORT\_CMD\_STOP command.*

### Typedefs

- typedef struct [\\_sample11\\_struct\\_sample\\_gtx\\_t](#) [sample11\\_typedefstruct\\_sample\\_gtx\\_t](#)

## Functions

- boolean `clk_regime_resource_required` (`clk_regime_resource_type` resource)
- boolean `clk_regime_resource_required_by_client` (`clk_regime_client_type` client, `clk_regime_resource_type` resource)
- void `clk_regime_resource_enable` (`clk_regime_client_type` client, `clk_regime_resource_type` resource)
- void `clk_regime_resource_disable` (`clk_regime_client_type` client, `clk_regime_resource_type` resource)
- void `clk_regime_rm_verbose` (boolean enable)
- void `clk_regime_rm_register_handler` (`clk_regime_resource_type` resource, `clkrgm_rm_handler_type` handler)

## WFD Cold Boot Values

- `#define FANCY_COLD_BOOT_START_BLOCK_VALUE`
- `#define FANCY_MAX_COLD_BOOT_END_BLOCK_VALUE`
- `#define FANCY_COLD_BOOT_BLOCK_VALUE_INVALID`
- `#define FANCY_COLD_BOOT_BLOCK_VALUE_UNASSIGNED`

### 5.2.1 Define Documentation

#### 5.2.1.1 `#define FANCY_COLD_BOOT_START_BLOCK_VALUE`

Initial value for the start block.

#### 5.2.1.2 `#define FANCY_MAX_COLD_BOOT_END_BLOCK_VALUE`

Maximum value for the end block.

#### 5.2.1.3 `#define FANCY_COLD_BOOT_BLOCK_VALUE_INVALID`

Value for the cold boot block is invalid.

#### 5.2.1.4 `#define FANCY_COLD_BOOT_BLOCK_VALUE_UNASSIGNED`

Value for the cold boot block is unassigned.

## 5.2.2 Typedef Documentation

### 5.2.2.1 typedef struct \_sample11\_struct\_sample\_gtx\_t sample11\_t typedef struct \_sample\_gtx\_t

Sample 11 typedef struct with a struct member that has an enum and a union member. Note that the comment for struct member 3 (enum) and struct member 4 (union) do not show up in PDF under this typedef struct as it should. In fact, they don't show up anywhere in the PDF. Dimitri fixing as part of SOW task 2f.

## 5.2.3 Function Documentation

### 5.2.3.1 boolean clk\_regime\_resource\_required ( clk\_regime\_resource\_type *resource* )

**Deprecated** Checks whether the specified resource is currently required by any clients.

#### Parameters

in	<i>resource</i>	Resource to check.
----	-----------------	--------------------

#### Returns

TRUE – Resource is required.

FALSE – Resource is not required.

#### Dependencies

None.

### 5.2.3.2 boolean clk\_regime\_resource\_required\_by\_client ( clk\_regime\_client\_type *client*, clk\_regime\_resource\_type *resource* )

**Deprecated** Checks whether the specified resource is currently required by a specific client.

#### Parameters

in	<i>client</i>	Client to check.
in	<i>resource</i>	Resource to check.

**Returns**

TRUE – Resource is required.  
 FALSE – Resource is not required.

**Dependencies**

None.

### 5.2.3.3 void clk\_regime\_resource\_enable ( clk\_regime\_client\_type *client*, clk\_regime\_resource\_type *resource* )

**Deprecated** Called when a client requires the use of a particular clock regime resource. This function does not support nesting.

**Parameters**

in	<i>client</i>	Client that is making the request.
in	<i>resource</i>	Resource to be enabled.

**Returns**

None.

**Dependencies**

None.

### 5.2.3.4 void clk\_regime\_resource\_disable ( clk\_regime\_client\_type *client*, clk\_regime\_resource\_type *resource* )

**Deprecated** Called when a client no longer requires the use of a particular clock regime resource.

**Parameters**

in	<i>client</i>	Client that is making the request.
in	<i>resource</i>	Resource to be disabled.

**Returns**

None.

**Dependencies**

None.

### 5.2.3.5 void clk\_regime\_rm\_verbose ( boolean *enable* )

**Deprecated** Sets the resource manager to Verbose mode.

**Parameters**

in	<i>enable</i>	Whether or not to be verbose.
----	---------------	-------------------------------

**Returns**

None.

**Dependencies**

None.

### 5.2.3.6 void clk\_regime\_rm\_register\_handler ( clk\_regime\_resource\_type *resource*, clkrgm\_rm\_handler\_type *handler* )

**Deprecated** Called by target-specific code to register a handler to manage the specified resource. When requests for that resource arrive, this handler is executed.

**Parameters**

in	<i>resource</i>	Resource for which to register.
in	<i>handler</i>	Handler for the resource.

**Returns**

None.

**Dependencies**

None.

**Side effects**

The caller cannot be in a mutex lock because the call uses mutex, and the mutex does not support nesting.

## 5.3 Fancy Device Command: Start DMAs

This section describes the TP\_PORT\_CMD\_START command.

### Data Structures

- struct `leb_port_cmd_start_t`

*Payload of the `LEB_PORT_CMD_START` command, which starts DMAs on a hardware port.*

### Defines

- #define `LEB_PORT_SAMPLE_RATE_8K`
- #define `LEB_PORT_SAMPLE_RATE_16K`
- #define `LEB_PORT_SAMPLE_RATE_48K`
- #define `LEB_PORT_CMD_START`

### Typedefs

- typedef struct `leb_port_cmd_start_t` `leb_port_cmd_start_t`

#### 5.3.1 Define Documentation

##### 5.3.1.1 #define `LEB_PORT_SAMPLE_RATE_8K`

Sample rate of 8000 Hz.

##### 5.3.1.2 #define `LEB_PORT_SAMPLE_RATE_16K`

Sample rate of 16000 Hz.

##### 5.3.1.3 #define `LEB_PORT_SAMPLE_RATE_48K`

Sample rate of 48000 Hz.

##### 5.3.1.4 #define `LEB_PORT_CMD_START`

Starts DMAs on a specified hardware port.

#### Relevant APR header fields

Opcode – `LEB_PORT_CMD_START` = 0X000100CA

**APR message payload**

Type	Parameter	Supported values	Description
uint16	fancy_device_id	See Hardware Ports in Appendix A	Port interface and direction to start. The direction is indicated by the LSB; other bits indicate the fancy_device_id.
uint16	gain	LEB number unsigned	Gain of the port represented in LEB number format
uint32	sample_rate	8000, 16000, 48000	Sampling rate of the port.

**Prerequisites**

The LEB\_PORT\_FANCY\_DEVICE\_IF\_CONFIG command must be sent before this command.

**Returns**

APR\_IBASIC\_RESP\_RESULT

**5.3.2 Typedef Documentation****5.3.2.1 typedef struct leb\_port\_cmd\_start\_t leb\_port\_cmd\_start\_t**

Payload structure for the [LEB\\_PORT\\_CMD\\_START](#) command.

## 5.4 Fancy Device Command: Stop DMAs

This section describes the TP\_PORT\_CMD\_STOP command.

### Defines

- #define [LEB\\_PORT\\_CMD\\_STOP](#)

### 5.4.1 Define Documentation

#### 5.4.1.1 #define LEB\_PORT\_CMD\_STOP

Stops DMAs on a specified hardware port.

#### Relevant APR header fields

Opcode – 0x000100CB

#### APR message payload

Type	Parameter	Supported values	Description
uint16	fancy_device_id	See Hardware Ports in Appendix <a href="#">A</a>	Port interface and direction to stop.
uint16	reserved	Must be set to zero	Reserved for 32-bit alignment.

#### Prerequisites

None.

#### Returns

APR\_IBASIC\_RESP\_RESULT

## 5.5 Second Fancy Device API

This is a brief description for the Second Fancy Device API. This is the detailed description for the second API group.

### Data Structures

- class [CRectangle](#)
- struct [fancy\\_warm\\_boot\\_block](#)

### Namespaces

- namespace [AR](#)  
*Access rights namespace.*
- namespace [fancy\\_audio\\_1](#)  
*Provides SamplerState and ChannelMode1 enumeration types.*

### Defines

- #define [FANCY\\_WARM\\_BOOT\\_START\\_BLOCK\\_VALUE](#)
- #define [FANCY\\_MAX\\_WARM\\_BOOT\\_END\\_BLOCK\\_VALUE](#)
- #define [FANCY\\_WARM\\_BOOT\\_BLOCK\\_VALUE\\_INVALID](#)
- #define [FANCY\\_WARM\\_BOOT\\_BLOCK\\_VALUE\\_UNASSIGNED\\_WITH\\_A\\_VERY\\_LONG\\_LONG\\_NAME\\_WITH\\_UNDERSCORES](#)

### Enumerations

- enum { [download\\_OOB](#), [download\\_NOOB](#), [download\\_ONENOOB](#), [download\\_MULTI](#) }
- enum [download\\_tech](#) { [download\\_SLC](#), [download\\_MLC](#) }
- enum [download\\_ID](#) { [download\\_x8](#), [download\\_x16](#) }
- enum { [FANCY\\_READ\\_MAIN](#), [FANCY\\_READ\\_SPARE](#), [FANCY\\_READ\\_MAIN\\_SPARE](#), [FANCY\\_READ\\_RAW](#), [FANCY\\_READ\\_BYTES](#) }

### Functions

- boolean [fd\\_regime\\_resource\\_required](#) (fd\_regime\_resource\_type resource)
- boolean [fd\\_regime\\_resource\\_required\\_by\\_client](#) (fd\_regime\_client\_type client, fd\_regime\_resource\_type resource)
- void [fd\\_regime\\_resource\\_enable](#) (fd\_regime\_client\_type client, fd\_regime\_resource\_type resource)
- void [fd\\_regime\\_resource\\_disable](#) (fd\_regime\_client\_type client, fd\_regime\_resource\_type resource)
- void [fd\\_regime\\_rm\\_verbose](#) (boolean enable)

- void `fd_regime_rm_register_handler` (`fd_regime_resource_type` resource, `fdrgm_rm_handler_type` handler)
- void `CRectangle::set_values` (int, int)

### 5.5.1 Detailed Description

**Deprecated** Checks whether the specified resource is currently required by any clients.

#### Parameters

<code>in</code>	<i>resource</i>	Resource to check.
-----------------	-----------------	--------------------

#### Returns

TRUE – Resource is required.

FALSE – Resource is not required.

#### Dependencies

None.

### 5.5.2 Define Documentation

#### 5.5.2.1 `#define FANCY_WARM_BOOT_START_BLOCK_VALUE`

Initial value for the start block.

#### 5.5.2.2 `#define FANCY_MAX_WARM_BOOT_END_BLOCK_VALUE`

Maximum value for the end block.

#### 5.5.2.3 `#define FANCY_WARM_BOOT_BLOCK_VALUE_INVALID`

Warm boot block value is invalid.

#### 5.5.2.4 `#define FANCY_WARM_BOOT_BLOCK_VALUE_UNASSIGNED_WITH_A_VERY_LONG_LONG_DEFINENAME_WITH_NO_UNDERSCORES`

Warm boot block value is unassigned.

### 5.5.3 Enumeration Type Documentation

#### 5.5.3.1 anonymous enum

Identifies the device types for downloading software to one or more devices.

**Enumerator:**

**download\_OOB** Out-Of-Bounds device.

**download\_NOOB** More than one Not-Out-Of-Bounds device.

**Note:** This is an example of a note for an enum member (note1 command). This can also be used in param descriptions.

**download\_ONENOOB** OneNOOB device.

**download\_MULTI** Multiple devices.

**5.5.3.2 enum download\_tech**

Identifies the bits per cell for the device.

**Enumerator:**

**download\_SLC** Single-Level Cell device.

**download\_MLC** Multi-Level Cell device.

**5.5.3.3 enum download\_ID**

Identifies the download ID.

**Enumerator:**

**download\_x8** 8-bit interface download ID.

**download\_x16** 16-bit interface download ID.

**5.5.4 Function Documentation****5.5.4.1 boolean fd\_regime\_resource\_required\_by\_client ( fd\_regime\_client\_type *client*, fd\_regime\_resource\_type *resource* )**

**Deprecated** Checks whether the specified resource is currently required by a specific client.

**Parameters**

in	<i>client</i>	Client to check.
in	<i>resource</i>	Resource to check.

**Returns**

TRUE – Resource is required.

FALSE – Resource is not required.

**Dependencies**

None.

#### 5.5.4.2 void fd\_regime\_resource\_enable ( fd\_regime\_client\_type *client*, fd\_regime\_resource\_type *resource* )

**Deprecated** Called when a client requires the use of a particular Fancy Device regime resource. This function does not support nesting.

##### Parameters

in	<i>client</i>	Client that is making the request.
in	<i>resource</i>	Resource to be enabled.

##### Returns

None.

##### Dependencies

None.

#### 5.5.4.3 void fd\_regime\_resource\_disable ( fd\_regime\_client\_type *client*, fd\_regime\_resource\_type *resource* )

**Deprecated** Called when a client no longer requires the use of a particular Fancy Device regime resource.

##### Parameters

in	<i>client</i>	Client that is making the request.
in	<i>resource</i>	Resource to be disabled.

##### Returns

None.

##### Dependencies

None.

#### 5.5.4.4 void fd\_regime\_rm\_verbose ( boolean *enable* )

**Deprecated** Sets the resource manager to Verbose mode.

##### Parameters

in	<i>enable</i>	Whether or not to be verbose.
----	---------------	-------------------------------

**Returns**

None.

**Dependencies**

None.

#### 5.5.4.5 void fd\_regime\_rm\_register\_handler ( fd\_regime\_resource\_type *resource*, fdrgm\_rm\_handler\_type *handler* )

**Deprecated** Called by target-specific code to register a handler to manage the specified resource. When requests for that resource arrive, this handler is executed.

**Parameters**

in	<i>resource</i>	Resource for which to register.
in	<i>handler</i>	Handler for the resource.

**Returns**

None.

**Dependencies**

None.

**Side effects**

The caller cannot be in a mutex lock because the call uses mutex, and the mutex does not support nesting.

## 5.6 Third Fancy Device API

This is a brief description for the third Fancy Device API. This is the detailed description for the third API group.

### Data Structures

- struct [fancy\\_cold\\_boot\\_block](#)
- union [\\_AfancyAudioEvent](#)
- struct [PACKED\\_POST](#)
- struct [FancyIAO](#)

### Namespaces

- namespace [fancy\\_audio\\_2](#)

*Provides ResamplerState and ChannelMode2 enumeration types.*

### Interfaces

- [Subgroup of Third Fancy Device API](#)

*This is a brief description for the subgroup of the third Fancy Device API. This is the detailed description for the subgroup of the third API group.*

### Defines

- #define [FANCY\\_DEVICE\\_DONE](#)
- #define [FANCY\\_DEVICE\\_FAIL](#)
- #define [FANCY\\_DEVICE\\_NOT\\_SUPPORTED](#)
- #define [FANCY\\_DEVICE\\_CP\\_READ\\_FAIL](#)

### Typedefs

- typedef PACKED struct [PACKED\\_POST fancy\\_qos\\_params\\_type](#)
- typedef PACKED enum [PACKED\\_POST fancy\\_header\\_comp\\_e\\_type](#)

### Enumerations

- enum [PACKED\\_POST](#) { [FANCY\\_HEADER\\_COMP\\_OFF](#), [FANCY\\_HEADER\\_COMP\\_ON](#), [FANCY\\_HEADER\\_COMP\\_MAX](#) }
- enum [fancy\\_dev\\_val\\_e\\_type](#) { [FANCY\\_DEVICE\\_VAL\\_OFF](#), [FANCY\\_DEVICE\\_VAL\\_ON](#) }
- enum [FancySysTimeType1](#) { [IAO\\_SYSTIME\\_UMTS](#), [IAO\\_SYSTIME\\_GSM](#), [IAO\\_SYSTIME\\_TOT](#) }

- enum `WfdWSEvtType` { `WFD_WS_EVENT_TOT` }

## Functions

- fancy\_return\_type `fancy_report_event` (const fancy\_event\_data\_type \*data)
- static int `CreateInstance` (FANCYCLID clsid, IEnv \*pEnvironment, IPrivSet \*pPrivSet, void \*\*ppNewObj)
- virtual int `NDQueryInterface` (FANCYID idReq, IQI \*\*ppIface)
- FancyResult `NameThread` ()
- `FancyInterfere` (FANCYCLSID clsid, pEnv \*pEnvironment, int &result)
- int `printf` (const char \*fmt,...)

### 5.6.1 Define Documentation

#### 5.6.1.1 #define FANCY\_DEVICE\_DONE

Operation passed.

#### 5.6.1.2 #define FANCY\_DEVICE\_FAIL

Operation failed.

#### 5.6.1.3 #define FANCY\_DEVICE\_NOT\_SUPPORTED

Device is not supported.

#### 5.6.1.4 #define FANCY\_DEVICE\_CP\_READ\_FAIL

Copy page read failure.

### 5.6.2 Enumeration Type Documentation

#### 5.6.2.1 enum PACKED\_POST

Fancy header compression types.

##### Enumerator:

***FANCY\_HEADER\_COMP\_OFF*** Compression is off (default).

***FANCY\_HEADER\_COMP\_ON*** Compression is on when selected.

***FANCY\_HEADER\_COMP\_MAX*** Forces the maximum compression to 0xff so the enumeration is defined as a byte.

### 5.6.2.2 enum fancy\_dev\_val\_e\_type

Fancy device validation modes.

**Enumerator:**

**FANCY\_DEVICE\_VAL\_OFF** Device validation mode is off (default).

**FANCY\_DEVICE\_VAL\_ON** Device validation mode is on when selected.

### 5.6.2.3 enum FancySysTimeType1

**Enumerator:**

**IAO\_SYSTIME\_GSM** GSM system time.

**IAO\_SYSTIME\_TOT** Total number of system time types.

### 5.6.2.4 enum WfdWSEvtType

Supported WFD warm start events.

**Enumerator:**

**WFD\_WS\_EVENT\_TOT** Total number of warm start events

## 5.6.3 Function Documentation

### 5.6.3.1 fancy\_return\_type fancy\_report\_event ( const fancy\_event\_data\_type \* data )

Event-driven drivers call this function to report asynchronous events to the Fancy Device.

**Parameters**

in	<i>data</i>	Event-related data.
----	-------------	---------------------

## Returns

- FANCY\_SUCCESS – Requested operation was successful.
- FANCY\_FAILURE – Requested operation was not successful.
- FANCY\_LOCKED – Operation failed because device was locked.

## Dependencies

None.

### 5.6.3.2 static int CreateInstance ( FANCYCLID *clsid*, IEnv \* *pEnvironment*, IPrivSet \* *pPrivSet*, void \*\* *ppNewObj* )

Provides a public entry point for the module. A new instance of FancyInterfere is created for FancyModule, and the default interface is returned.

The following table is an example of a table which was created using the Word-to-LaTeX tool with minor manual formatting adjustments:

Type	Parameter	Supported values	Description
uint32	uProfilingLevel	0 – Turn off profiling  1 – Collect summary information of MIPS/memory  2 – Collect summary information of MIPS/memory, per-software thread MIPS, and stack consumption	
uint32	uPhyAddress	Physical address where the aDSP can write the profiling data for each event	Must be 4 K-aligned.
uint32	uSize	Amount of available space in bytes for writing profiling data	Must be a multiple of 4 K page size
uint32	uSamplingPeriod	≥ 100000	Number of $\mu$ s between successive events

## Note

- Test note 1.
- Test note 2.
- Test note 3.

## Parameters

in	<i>clsid</i>	Class ID of the module.
in	<i>pEnvironment</i>	Interface to the Fancy Services environment.
out	<i>pPrivSet</i>	Privilege set of the caller.
in, out	<i>ppNewObj</i>	Set to the interface pointer of the new instance.

**Returns**

SUCCESS – Instance was created successfully.  
 ENOMEMORY – Indicates a memory allocation failure.

**Dependencies**

None.

**Side effects**

An invalid class ID may produce erroneous results.

**See also**

[NDQueryInterface](#)

**5.6.3.3 virtual int NDQueryInterface ( FANCYID *idReq*, IQI \*\* *ppIface* ) [virtual]**

Handles interface pointers for non-based classes.

This method must be implemented if the FancyInterfere module supports any interfaces not handled by its base classes.

**Note**

Test note 1.  
 Test note 2.  
 Test note 3.  
 Test note 4.  
 Test note 5.  
 Test note 6.  
 Test note 7.  
 Test note 8.  
 Test note 9.  
 Test note 10.

**Parameters**

in	<i>idReq</i>	Unique ID of the requested interface.
out	<i>ppIface</i>	Interface pointer of the requested interface.

**Returns**

SUCCESS – Interface is returned successfully.  
 ECLASSNOTSUPPORT – Interface is not supported.

**5.6.3.4 FancyResult NameThread ( )**

Handles thread name initialization.

The deriving class can override this method to provide a descriptive name for the optional output thread. This helps distinguish it in debugging applications. The default implementation provides a generic name.

**Note:** This is an example of a single hanging indent note (note1hang command). It is primarily intended for use in fancy tools during software download.

### Returns

SUCCESS – Initialization was successful.

FAILURE – Initialization failed.

#### 5.6.3.5 FancyInterfere ( FANCYCLSID *clsid*, pEnv \* *pEnvironment*, int & *result* )

Provides a class constructor.

This is the component constructor, meant to be called by the class factory of the component.

### Parameters

in	<i>clsid</i>	Class ID of the module.
in	<i>pEnvironment</i>	Interface to the Fancy Services environment.
out	<i>result</i>	Result of the function.

### Returns

The following results may be returned:

- Valid class object
- Invalid class object

#### 5.6.3.6 int printf ( const char \* *fmt*, ... )

Standard print function. The extern keyword is used to inform the compiler about variables declared outside of the current file. Variables described by extern statements do not have any space allocated for them because they have been previously defined elsewhere.

## 5.7 Subgroup of Third Fancy Device API

This is a brief description for the subgroup of the third Fancy Device API. This is the detailed description for the subgroup of the third API group.

## 5.8 Fancy Device Common Data

This is a brief description for the Fancy Device Common Data group. This is the detailed description for the Fancy Device Common Data group.

- typedef struct fancy\_handle **fancy\_handle**
- typedef fancy\_handle \* **fancy\_handle\_t**
- typedef npfltr\_np6\_hdr\_field\_mask\_type **field\_mask**
- #define [FANCY\\_DEFAULT\\_DATA\\_PROFILE\\_VERSION](#)

### 5.8.1 Define Documentation

#### 5.8.1.1 #define FANCY\_DEFAULT\_DATA\_PROFILE\_VERSION

Default profile version. The value of the Fancy Device target's profile version depends on the following conditional settings:

- If FANCY\_DATA\_TARGET1 is TRUE, FANCY\_DATA\_PROFILE\_VERSION = 7.
- If FANCY\_DATA\_TARGET2 is TRUE, FANCY\_DATA\_PROFILE\_VERSION = 9.
- If FANCY\_DATA\_TARGET3 is TRUE, FANCY\_DATA\_PROFILE\_VERSION = 12.
- If none of the above conditions are TRUE, FANCY\_DEFAULT\_DATA\_PROFILE\_VERSION = 3.

## 5.9 Fancy Device Calibration IDs

Calibration requires identifying which algorithm module must be calibrated for each Fancy Device type. The parameter structures are designed to be packed bytes with a total size of a multiple of two bytes. Different Fancy Devices can use the same ID if the parameter structure and behavior are identical.

### Interfaces

- [Calibration: Port Information Fancy Device IDs](#)

*This section provides the Fancy Device IDs and ports for calibration purposes.*

- [Calibration: Sidetone Fancy Device IDs](#)

*This section describes the Fancy Device ID sidetones for calibration purposes.*

## 5.10 Calibration: Port Information Fancy Device IDs

This section provides the Fancy Device IDs and ports for calibration purposes.

### Data Structures

- struct [fd\\_port\\_cmd\\_port\\_ctl\\_t](#)

## 5.11 Calibration: Sidetone Fancy Device IDs

This section describes the Fancy Device ID sidetones for calibration purposes.

### Data Structures

- struct [fd\\_port\\_cmd\\_sidetone\\_ctl\\_t](#)

## 5.12 Deprecated\_example

### Functions

- test\_enum\_type [test\\_process\\_nice\\_list](#) (item\_type \*\*nice\_list\_msg\_ptr, uint16 msg\_len, nice\_list\_pdata\_type \*sys\_nice\_list, uint32 \*security\_alert\_mask\_ptr, boolean ignore\_expiration)
- test\_enum\_type [test\\_process\\_bad\\_list](#) (item\_type \*\*bad\_list\_msg\_ptr, uint16 msg\_len, bad\_list\_pdata\_type \*sys\_bad\_list, uint32 \*security\_alert\_mask\_ptr, boolean ignore\_expiration)

### 5.12.1 Function Documentation

#### 5.12.1.1 test\_enum\_type test\_process\_nice\_list ( item\_type \*\* nice\_list\_msg\_ptr, uint16 msg\_len, nice\_list\_pdata\_type \* sys\_nice\_list, uint32 \* security\_alert\_mask\_ptr, boolean ignore\_expiration )

**Deprecated** Use the new interface to process a nice list.

This function processes a nice list, by parsing the nice list from the server up to the top.

#### Parameters

in	<i>nice_list_msg_ptr</i>	Pointer to the message containing the nice list.
out	<i>longkey</i>	Long public key.
out	<i>sys_nice_list</i>	System nice list.
in	<i>security_alert_mask_ptr</i>	Alert mask for processing errors.
in	<i>ignore_expiration</i>	If the time validity of the list is to be checked. TRUE – Do not check. FALSE – Check.

#### Returns

- E\_SUCCESS – Processing is successful.
- E\_DATA\_INVALID – List is not valid.
- E\_DATA\_TOO\_LARGE – List is too large for the buffer.
- E\_NICELIST\_FAILURE – Failed to process the nice list due to other reasons.

#### 5.12.1.2 test\_enum\_type test\_process\_bad\_list ( item\_type \*\* bad\_list\_msg\_ptr, uint16 msg\_len, bad\_list\_pdata\_type \* sys\_bad\_list, uint32 \* security\_alert\_mask\_ptr, boolean ignore\_expiration )

**Deprecated** Use new interface to process a bad list this is a very long sentence, just to see what this will do when it wraps in the document.

- First item.
- Second item.

This function processes a bad list, by parsing the bad list from the server up to the top - oh yeah!

## Parameters

in	<i>bad_list_msg_ptr</i>	Pointer to the message containing the bad list.
out	<i>longkey</i>	Long public key.
out	<i>sys_bad_list</i>	System bad list.
in	<i>security_alert_mask_ptr</i>	Alert mask for processing errors.
in	<i>ignore_expiration</i>	If the time validity of the list is to be checked. TRUE – Do not check. FALSE – Check.

## Returns

E\_SUCCESS – Processing is successful.

E\_DATA\_INVALID – List is not valid.

E\_DATA\_TOO\_LARGE – List is too large for the buffer.

E\_BADLIST\_FAILURE – Failed to process the bad list due to other reasons.

# 6 Namespace Documentation

---

## 6.1 AR Namespace Reference

Access rights namespace.

### Enumerations

- enum **RightsChangeReason** { **RightsChangeReason\_Added**, **RightsChangeReason\_Deleted**, **RightsChangeReason\_Modified**, **RightsChangeReason\_Unknown**, **\_AR\_PLACEHOLDER\_RightsChangeReason** }

### Variables

- const ::FANCYID [FANCYID\\_IRightsChange](#)

#### 6.1.1 Detailed Description

Detailed description for the [AR](#) namespace.

#### 6.1.2 Variable Documentation

##### 6.1.2.1 const ::FANCYID AR::FANCYID\_IRightsChange

Changes the access rights.

## 6.2 fancy\_audio\_1 Namespace Reference

Provides SamplerState and ChannelMode1 enumeration types.

### Enumerations

- enum **ResamplerState** { **RS\_OK**, **RS\_NEED\_INPUT\_BUF**, **RS\_NEED\_OUTPUT\_BUF** }
- enum **ChannelMode1** { **MONO**, **STEREO** }

## Functions

- static int [CreateInstance](#) (FANCYCLSID clsid, IEnv \*pEnvironment, IPrivSet \*pPrivSet, void \*\*ppNewObj)

## Variables

- GenericResamplerLib \* [m\\_pResampler](#)
- bool [m\\_Enabled](#)
- ICritSect \* [m\\_pRxBufferLock](#)
- std::queue< FancyCommand \* > [m\\_fancyRxBufferQueue](#)
- std::queue< FancyCommand \* > [m\\_fancyTxBufferQueue](#)
- [DECLARE\\_IQI](#)

### 6.2.1 Detailed Description

This is the first fancy audio namespace.

### 6.2.2 Function Documentation

#### 6.2.2.1 static int fancy\_audio\_1::CreateInstance ( FANCYCLSID *clsid*, IEnv \* *pEnvironment*, IPrivSet \* *pPrivSet*, void \*\* *ppNewObj* )

Provides a public entry point for the module.

A new instance of FancyPlayback is created, and the default interface (FancyMediaModule) is returned.

#### Parameters

in	<i>clsid</i>	FANCYCLSID of the module.
in	<i>pEnvironment</i>	Interface to the Fancy Services environment.
out	<i>pPrivSet</i>	Privilege set of the caller.
in, out	<i>ppNewObj</i>	Interface pointer of the new instance.

#### Returns

SUCCESS – Instance was created successfully.  
 ENOMEMORY – Memory allocation failure.

#### Comments

A memory allocation failure requires a reboot.

#### Errors

If the new environment value is not an integer, the compiler generates an error.

If the new environment object is called outside the Fancy Services environment without the pointer, a constraint error occurs.

## 6.2.3 Variable Documentation

### 6.2.3.1 GenericResamplerLib\* fancy\_audio\_1::m\_pResampler

Generic Resampler library object.

### 6.2.3.2 bool fancy\_audio\_1::m\_Enabled

Enables the master flag during FancyPlayback.

### 6.2.3.3 ICritSect\* fancy\_audio\_1::m\_pRxBufferLock

Critical section for the Rx buffer queue.

### 6.2.3.4 std::queue<FancyCommand\*> fancy\_audio\_1::m\_fancyRxBufferQueue

Rx and Tx queues for Fancy Device buffers received from the application.

### 6.2.3.5 fancy\_audio\_1::DECLARE\_IQI

Pulls in IQueryInterface method definitions.

## 6.3 fancy\_audio\_2 Namespace Reference

Provides ResamplerState and ChannelMode2 enumeration types.

### Enumerations

- enum [SamplerState](#) { [S\\_OK](#), [S\\_NEED\\_INPUT\\_BUF](#), [S\\_NEED\\_OUTPUT\\_BUF](#) }
- enum [ChannelMode2](#) { [MONO](#), [STEREO](#) }

### Functions

- virtual int CDECL [NDQueryInterface](#) (FANCYCLSIDRQ idReq, IQI \*\*ppIface)
- FancyResult [NameThread](#) ()
- [FancyInterfere](#) (FANCYCLSID clsid, IEnv \*pEnvironment, int &result)

## Variables

- GenericSamplerLib \* [m\\_pResampler](#)
- uint32 [m\\_uiInpBufferSize](#)
- boolean [m\\_fSampTypeSet](#)
- bool [m\\_Enabled](#)
- bool [m\\_EnabledRead](#)
- ISignalQ \* [m\\_pEventSignalQ](#)
- std::queue< FancyCommand \* > [m\\_fancyRxBufferQueue](#)
- std::queue< FancyCommand \* > [m\\_fancyTxBufferQueue](#)
- [DECLARE\\_IQI](#)

### 6.3.1 Detailed Description

This is the detailed fancy audio namespace.

### 6.3.2 Enumeration Type Documentation

#### 6.3.2.1 enum fancy\_audio\_2::SamplerState

Sample comment for enum inside a namespace.

##### Enumerator:

- S\_OK** Resampler state is in OK mode.
- S\_NEED\_INPUT\_BUF** Resampler state needs an input buffer.
- S\_NEED\_OUTPUT\_BUF** Resampler state needs an output buffer.

#### 6.3.2.2 enum fancy\_audio\_2::ChannelMode2

Another sample comment for enum inside a namespace.

##### Enumerator:

- MONO** Channel Mode 2 is in mono mode.
- STEREO** Channel Mode 2 is in stereo mode.

### 6.3.3 Function Documentation

#### 6.3.3.1 virtual int CDECL fancy\_audio\_2::NDQueryInterface ( FANCYCLSIDRQ *idReq*, IQI \*\* *pplface* ) [virtual]

Provides an interface to support the FancyInterface module.

This method must be implemented if the FancyInterfere module supports any interfaces not handled by its base classes.

### Parameters

in	<i>idReq</i>	Unique ID of the requested interface.
out	<i>ppIface</i>	Interface pointer of the requested interface.

### Returns

SUCCESS – Interface is returned successfully.  
 ECLASSNOTSUPPORT – Interface is not supported.

#### 6.3.3.2 FancyResult fancy\_audio\_2::NameThread ( )

Overrides a generic name.

The deriving class may override this method to provide a descriptive name for the optional output thread to help distinguish it in debugging applications. The default implementation provides a generic name.

### Returns

SUCCESS – Initialization was successful.  
 FAILURE – Initialization failed.

#### 6.3.3.3 fancy\_audio\_2::FancyInterfere ( FANCYCLSID *clsid*, IEnv \* *pEnvironment*, int & *result* )

Provides a class constructor.

This is the component constructor, meant to be called by the class factory of the component.

### Parameters

in	<i>clsid</i>	Class ID of the module.
in	<i>pEnvironment</i>	Interface to the component services environment.
out	<i>result</i>	Result of the function.

### Returns

New class object.

## 6.3.4 Variable Documentation

#### 6.3.4.1 GenericSamplerLib\* fancy\_audio\_2::m\_pResampler

Generic Sampler library object.

**6.3.4.2 uint32 fancy\_audio\_2::m\_uilnpBufferSize**

Size of the input buffer delivered to the sampler.

**6.3.4.3 boolean fancy\_audio\_2::m\_fSampTypeSet**

SamplerType Set flag.

**6.3.4.4 bool fancy\_audio\_2::m\_Enabled**

Enables the flag master for FancyInterfere.

**6.3.4.5 bool fancy\_audio\_2::m\_EnabledRead**

Enables FancyInterfere on the Read channel.

**6.3.4.6 ISignalQ\* fancy\_audio\_2::m\_pEventSignalQ**

Signal queue for blocking events.

**6.3.4.7 std::queue<FancyCommand\*> fancy\_audio\_2::m\_fancyRxBufferQueue**

Rx queues for Fancy Device buffers received from the application.

**6.3.4.8 std::queue<FancyCommand\*> fancy\_audio\_2::m\_fancyTxBufferQueue**

Tx queues for Fancy Device buffers received from the application.

**6.3.4.9 fancy\_audio\_2::DECLARE\_IQI**

Pulls in IQueryInterface method definitions.

# 7 Data Structure Documentation

---

## 7.1 `_AfancyAudioEvent` Union Reference

### Data Fields

- struct `AfancyAudioAnyEvent` **any**
- struct `AfancyAudioAnyEvent` **header**

### 7.1.1 Detailed Description

Accesses the header values. This union includes two data structures.

The documentation for this union was generated from the following file:

- `SampleHeaderFile1_multigroups_C.h`

## 7.2 `_sample11_struct_sample_gtx_t` Struct Reference

### Data Fields

- void \* `main_gtx`
- `gtx_appgtx_t` `app_gtx`
- struct {  
    enum { `GTX_READY`, `GTX_RESP_SENDING`, `GTX_RESP_SENT` }  
    enum  
    `_sample11_struct_sample_gtx_t`:: { ... } `state`  
    lbool\_t `not_pending`  
    lbool\_t `sending_zldp`  
    void \* `buffer`  
    lbint32\_t `size`  
    lbint32\_t `bytes_sent`  
} `sample11_typedefstruct_encap_response`
- union {  
    `gtx_calling_t` `basic`  
    `led_calling_t` `acm`  
    `leb_calling_t` `ecm`  
    `gex_calling_t` `obex`

```
} sample11_union_gtx
```

### 7.2.1 Detailed Description

Sample 11 typedef struct with a struct member that has an enum and a union member. Note that the comment for struct member 3 (enum) and struct member 4 (union) do not show up in PDF under this typedef struct as it should. In fact, they don't show up anywhere in the PDF. Dimitri fixing as part of SOW task 2f.

### 7.2.2 Field Documentation

#### 7.2.2.1 void\* \_sample11\_struct\_sample\_gtx\_t::main\_gtx

Sample 11 typedef struct member 1.

#### 7.2.2.2 gtx\_appgtx\_t \_sample11\_struct\_sample\_gtx\_t::app\_gtx

Sample 11 typedef struct member 2.

#### 7.2.2.3 enum { ... } \_sample11\_struct\_sample\_gtx\_t::state

Sample 11 typedef struct member 3 with enum.

#### 7.2.2.4 union { ... } \_sample11\_struct\_sample\_gtx\_t::sample11\_union\_gtx

Sample 11 typedef struct union member 4.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.3 CRectangle Class Reference

### Public Member Functions

- void `set_values` (int, int)
- int `area` ()

### Data Fields

- int `x`
- int `y`

### 7.3.1 Detailed Description

Takes the height and length of a rectangle and returns the area value.

This class ([CRectangle](#)) contains four members: two input parameter members of type integer ( $x$ ,  $y$ , where  $x$ =height and  $y$ =length) and two member functions (`set_values`, `area`) with public access.

This class calls the `set_values` member function to set the input values ( $x$ ,  $y$ ) to integers. This function is void, which indicates that it does not return a result; it just holds the results temporarily. It then calls the `area` member function, which takes the values in the `set_values` member function ( $x$ ,  $y$ ), multiplies them ( $x*y$ ), and returns the result (area of the rectangle).

#### Parameters

in	$x$	Data member $x$ of type integer with private access. This member is private by default. This sentence was added to test out the single-spacing issue for long descriptions inside a parameter table.
in	$y$	Data member $y$ of type integer with private access. This member is private by default.

#### Returns

Area of the rectangle as an integer value.

#### Dependencies

None.

The documentation for this class was generated from the following file:

- `SampleHeaderFile1_multigroups_C.h`

## 7.4 fancy\_cold\_boot\_block Struct Reference

### Data Fields

- int [cold\\_boot\\_new\\_block](#)
- int [cold\\_boot\\_old\\_block](#)

### 7.4.1 Detailed Description

Holds the new and previous cold boot block numbers.

This is an optional detailed description. This structure is used in Fancy Device tools during software initialization.

## 7.4.2 Field Documentation

### 7.4.2.1 int fancy\_cold\_boot\_block::cold\_boot\_new\_block

New cold boot block number.

### 7.4.2.2 int fancy\_cold\_boot\_block::cold\_boot\_old\_block

Old cold boot block number.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.5 fancy\_warm\_boot\_block Struct Reference

### Data Fields

- int [warm\\_boot\\_new\\_block](#)
- int [warm\\_boot\\_old\\_block](#)

### 7.5.1 Detailed Description

Holds the new and previous warm boot block numbers.

This is an optional detailed description. This structure is used in Fancy Device tools during software download.

### 7.5.2 Field Documentation

#### 7.5.2.1 int fancy\_warm\_boot\_block::warm\_boot\_new\_block

New warm boot block number.

#### 7.5.2.2 int fancy\_warm\_boot\_block::warm\_boot\_old\_block

Old warm boot block number.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.6 FancyIAO Struct Reference

### Data Fields

- FancyDevice **FancyDevice**
- FancyResult(\* [FancyOpen](#) )(FancyDeviceHandle \*\_h, uint32 fancyFifoNum)
- FancyResult(\* [FancyClose](#) )(FancyDeviceHandle \*\_h, uint32 fancyFifoNum)
- FancyResult(\* [FancyAsyncRead](#) )(FancyDeviceHandle \*\_h, uint32 fancyFifoNum, FANCYSYSMemHandle hXferBufMem, uint32 fancyLen, FANCYSYSEventHandle hEvent)
- FancyResult(\* [FancyAsyncWrite](#) )(FancyDeviceHandle \*\_h, uint32 fancyFifoNum, FANCYSYSMemHandle hXferBufMem, uint32 fancyLen, FANCYSYSEventHandle hEvent)

### 7.6.1 Detailed Description

Fancy input and output device handles.

These handles allow the device to be configured for opening, closing, and synchronizing.

### 7.6.2 Field Documentation

#### 7.6.2.1 FancyResult(\* [FancyIAO::FancyOpen](#))(FancyDeviceHandle \*\_h, uint32 fancyFifoNum)

Main fancy device.

#### 7.6.2.2 FancyResult(\* [FancyIAO::FancyClose](#))(FancyDeviceHandle \*\_h, uint32 fancyFifoNum)

Open fancy device.

#### 7.6.2.3 FancyResult(\* [FancyIAO::FancyAsyncRead](#))(FancyDeviceHandle \*\_h, uint32 fancyFifoNum, FANCYSYSMemHandle hXferBufMem, uint32 fancyLen, FANCYSYSEventHandle hEvent)

Close fancy device.

#### 7.6.2.4 FancyResult(\* [FancyIAO::FancyAsyncWrite](#))(FancyDeviceHandle \*\_h, uint32 fancyFifoNum, FANCYSYSMemHandle hXferBufMem, uint32 fancyLen, FANCYSYSEventHandle hEvent)

Asynchronous read of fancy device.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.7 fd\_port\_cmd\_port\_ctl\_t Struct Reference

### Data Fields

- [uint8\\_t fd1\\_port\\_id](#)
- [uint8\\_t fd2\\_port\\_id](#)
- [uint8\\_t fd3](#)

### 7.7.1 Detailed Description

Payload structure for the FD\_PORT\_CMD\_PORT\_ID\_CTL command, which enables/disables Fancy Device ports.

### 7.7.2 Field Documentation

#### 7.7.2.1 uint8\_t fd\_port\_cmd\_port\_ctl\_t::fd1\_port\_id

Port ID for FD 1.

#### 7.7.2.2 uint8\_t fd\_port\_cmd\_port\_ctl\_t::fd2\_port\_id

Port ID for FD 2.

#### 7.7.2.3 uint8\_t fd\_port\_cmd\_port\_ctl\_t::fd3

Port ID for FD 3.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.8 fd\_port\_cmd\_sidetone\_ctl\_t Struct Reference

### Data Fields

- [uint16\\_t fd1\\_port\\_id\\_sidetone](#)
- [uint16\\_t fd2\\_port\\_id\\_sidetone](#)
- [uint16\\_t fd3\\_port\\_id\\_sidetone](#)
- [uint16\\_t fd\\_flag](#)

### 7.8.1 Detailed Description

Payload structure for the #FD\_PORT\_CMD\_SIDETONE\_CTL command, which enables/disables FD sidetones.

## 7.8.2 Field Documentation

### 7.8.2.1 `uint16_t fd_port_cmd_sidetone_ctl_t::fd1_port_id_sidetone`

Port ID for FD 1 sidetone.

### 7.8.2.2 `uint16_t fd_port_cmd_sidetone_ctl_t::fd2_port_id_sidetone`

Port ID for FD 2 sidetone.

### 7.8.2.3 `uint16_t fd_port_cmd_sidetone_ctl_t::fd3_port_id_sidetone`

Port ID for FD 3 sidetone.

### 7.8.2.4 `uint16_t fd_port_cmd_sidetone_ctl_t::fd_flag`

Specifies whether to enable or disable the FD sidetone.

- 0 – Disable
- 1 – Enable

The documentation for this struct was generated from the following file:

- `SampleHeaderFile1_multigroups_C.h`

## 7.9 `leb_port_cmd_start_t` Struct Reference

Payload of the [LEB\\_PORT\\_CMD\\_START](#) command, which starts DMAs on a hardware port.

### Data Fields

- `uint16_t fancy_device_id`
- `uint16_t gain`
- `uint32_t sample_rate`

### 7.9.1 Field Documentation

#### 7.9.1.1 `uint16_t leb_port_cmd_start_t::fancy_device_id`

Port interface and direction to start. The direction is indicated by the LSB; the other bits indicate the `fancy_device_id`.

### 7.9.1.2 uint16\_t leb\_port\_cmd\_start\_t::gain

Gain of the port represented in LEB number format.

### 7.9.1.3 uint32\_t leb\_port\_cmd\_start\_t::sample\_rate

Sampling rate of the port: 8000, 16000, 48000.

The documentation for this struct was generated from the following file:

- tp\_leb\_service\_commands.h

## 7.10 local\_area Struct Reference

### Data Fields

- uint32 [area\\_count](#)
- uint32 [area\\_size\\_in\\_bytes](#)

### 7.10.1 Field Documentation

#### 7.10.1.1 uint32 local\_area::area\_count

Total number of blocks in the local area.

#### 7.10.1.2 uint32 local\_area::area\_size\_in\_bytes

Size of each block in the local area.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.11 oob\_area\_info Struct Reference

### Data Fields

- uint8 [block\\_count](#)
- uint8 [block\\_size\\_in\\_bytes](#)

### 7.11.1 Detailed Description

Keeps track of out-of-bounds block area information and the size of each block.

## 7.11.2 Field Documentation

### 7.11.2.1 uint8 oob\_area\_info::block\_count

Number of blocks in the out-of-bounds area.

### 7.11.2.2 uint8 oob\_area\_info::block\_size\_in\_bytes

Size of each block in the out-of-bounds area.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.12 PACKED\_POST Struct Reference

### Data Fields

- boolean [valid\\_flg](#)
- uint32 [precedence](#)
- uint32 [mean](#)

### 7.12.1 Detailed Description

Stores Fancy Quality of Service parameters.

This is an optional detailed description. This structure includes three members.

### 7.12.2 Field Documentation

#### 7.12.2.1 boolean PACKED\_POST::valid\_flg

Indicates whether the parameters are set and valid. This is a test detailed sentence.

#### 7.12.2.2 uint32 PACKED\_POST::precedence

Precedence class. This is a test detailed sentence.

#### 7.12.2.3 uint32 PACKED\_POST::mean

Mean throughput class.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.13 sample10\_typedef\_struct\_with\_member\_with\_bulleted\_list Struct Reference

### Data Fields

- [uint32\\_t one\\_level](#)

#### 7.13.1 Detailed Description

Sample 10 typedef struct with member with a bulleted list in comment. In this example, the uProfiling-Level name is inside a LaTeX label command to create a hyperlink. Note that in this type of comment, a backslash n should be used prior to the bulleted list.

#### 7.13.2 Field Documentation

##### 7.13.2.1 uint32\_t sample10\_typedef\_struct\_with\_member\_with\_bulleted\_list::one\_level

First level:

- 0 – Comment for first item in bulleted list.
- 1 – Comment for second item in bulleted list.
- 2 – Comment for third item in bulleted list.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.14 sample12\_typedefstruct Struct Reference

### Data Fields

- `sample12_GEXResult(* reinit)(gex_t *_pif, const gex_format_t *in_format_ptr, gex_format_t *out_format_ptr, gex_buf_t *info_ptr)`

#### 7.14.1 Detailed Description

Sample 12 typedef struct with a function. Note that the comment for the struct member does not show up in PDF under this typedef struct as it should. Instead, it shows up under the Variable Documentation section in the PDF on page 23. Dimitri fixing as part of SOW task 2a.

## 7.14.2 Field Documentation

### 7.14.2.1 `sample12_GEXResult(* sample12_typedefstruct::reinit)(gex_t *_pif, const gex_format_t *in_format_ptr, gex_format_t *out_format_ptr, gex_buf_t *info_ptr)`

Sample 12 function in a typedef struct.

#### Parameters

<code>in</code>	<code>_pif</code>	Pointer to the library object.
<code>in, out</code>	<code>info_ptr</code>	Initialization information.

#### Returns

Indication of success or failure.

#### Dependencies

The `gex_getsize_f()` and `gex_init_f()` functions must have been executed, and memory must have been allocated.

#### Comments

Sample comment 1.

Sample comment 2.

Sample comment 3. This sample comment is intended to be very long so that it wrap the second sentence all the way to the next line.

#### Errors

Sample error 1.

Sample error 2.

Sample error 3. This sample error is intended to be very long so that it wrap the second sentence all the way to the next line.

#### Description

Sample description that is very very long so that it will wrap onto the next line.

#### Important:

Sample important statement 1.

Sample important statement 2. This statement is very long so that it will wrap onto the next line.

Sample important statement 3. This statement includes a bulleted list:

- List item 1.
- List item 2.
- List item 3 which includes another list:
  1. Sublist item 1.
  2. Sublist item 2.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.15 sample13\_typedef\_packed\_struct\_type Struct Reference

### Data Fields

- boolean [valid\\_flg](#)
- uint32 [precedence](#)
- uint32 [mean](#)
- struct {  
    lb\_arcid\_T [arcid](#)  
} **sample13\_typedefstruct\_arc\_reestab\_reestab\_params**
- struct {  
    lb\_nonarc\_id\_T [lb\\_nonarc\\_id](#)  
} **sample13\_struct\_typedefstruct\_nonarc\_reestab\_params**

### 7.15.1 Detailed Description

Sample 13 typedef packed struct with members and struct members. This is an example of a typedef packed struct with three members and two child struct members.

### 7.15.2 Field Documentation

#### 7.15.2.1 boolean sample13\_typedef\_packed\_struct\_type::valid\_flg

Sample 13 typedef struct member 1.

#### 7.15.2.2 uint32 sample13\_typedef\_packed\_struct\_type::precedence

Sample 13 typedef struct member 2.

#### 7.15.2.3 uint32 sample13\_typedef\_packed\_struct\_type::mean

Sample 1e typedef struct member 3.

#### 7.15.2.4 lb\_arcid\_T sample13\_typedef\_packed\_struct\_type::arcid

Sample 13 typedef struct member 4.

### 7.15.2.5 lb\_nonarc\_id\_T sample13\_typedef\_packed\_struct\_type::lb\_nonarc\_id

Sample 13 typedef struct member 5.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.16 sample14\_simple\_union\_msg\_type Union Reference

### Data Fields

- uint32 [dummy](#)

### 7.16.1 Detailed Description

Sample 14 simple union for a C function.

### 7.16.2 Field Documentation

#### 7.16.2.1 uint32 sample14\_simple\_union\_msg\_type::dummy

Sample 14 union member.

The documentation for this union was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.17 sample15\_typedef\_union\_u Union Reference

### Data Fields

- sample15\_union\_member1\_params\_s\_type [lb\\_cs\\_end](#)
- sample15\_union\_member2\_params\_s\_type [lb\\_ps\\_end](#)

### 7.17.1 Detailed Description

Sample 15 typedef union with two members.

This is the detailed description for this typedef union.

### 7.17.2 Field Documentation

#### 7.17.2.1 sample15\_union\_member1\_params\_s\_type sample15\_typedef\_union\_u::lb\_cs\_end

Sample 15 union member 1.

### 7.17.2.2 `sample15_union_member2_params_s_type` `sample15_typedef_union_u::lb_ps_end`

Sample 15 union member 2.

The documentation for this union was generated from the following file:

- `SampleHeaderFile1_multigroups_C.h`

## 7.18 `sample16_union_with_struct_members_u` Union Reference

### Data Fields

- struct {  
    `sample16_timer_id_T lb_timer_id`  
} `sample16_struct_member1`
- struct {  
    `sample16_utimer_id_T lb_utimer_id`  
} `sample16_struct_member2`

### 7.18.1 Detailed Description

Sample 16 union with two struct members.

### 7.18.2 Field Documentation

#### 7.18.2.1 `sample16_timer_id_T` `sample16_union_with_struct_members_u::lb_timer_id`

Sample 16 struct member 1.

#### 7.18.2.2 `sample16_utimer_id_T` `sample16_union_with_struct_members_u::lb_utimer_id`

Sample 16 struct member 2.

The documentation for this union was generated from the following file:

- `SampleHeaderFile1_multigroups_C.h`

## 7.19 `sample17_typedef_struct_type` Struct Reference

### Data Fields

```

### 7.19.1 Detailed Description

This a very complex sample typedef struct, which includes one enum type parameter, two union members and one struct member. Each union member includes two levels of nested struct members.

## 7.19.2 Field Documentation

### 7.19.2.1 `sample17_enum_type_param sample17_typedef_struct_type::np_vsn`

Sample 17 enum type parameter.

### 7.19.2.2 `npfltr_np4_hdr_field_mask_type sample17_typedef_struct_type::field_mask`

In mask.

### 7.19.2.3 `npfltr_np4_hdr_field_mask_type sample17_typedef_struct_type::err_mask`

Out mask.

### 7.19.2.4 `struct ps_in_addr sample17_typedef_struct_type::addr`

Sample 17 subnested struct member 1 of struct member 1 and 2 of union member 1.

### 7.19.2.5 `struct ps_in_addr sample17_typedef_struct_type::subnet_mask`

Sample 17 subnested struct member 2 of struct member 1 and 2 of union member 1.

### 7.19.2.6 `uint8 sample17_typedef_struct_type::val`

A value.

### 7.19.2.7 `uint8 sample17_typedef_struct_type::mask`

A mask.

### 7.19.2.8 `struct { ... } sample17_typedef_struct_type::sample17_struct_member1_of_union_member1`

This comment doesn't show up unless I put it at the end.

### 7.19.2.9 `npfltr_np6_hdr_field_mask_type sample17_typedef_struct_type::field_mask`

In mask.

### 7.19.2.10 `npfltr_np6_hdr_field_mask_type sample17_typedef_struct_type::err_mask`

Out mask.

**7.19.2.11 uint8 sample17\_ttypedef\_struct\_type::prefix\_len**

Length of the prefix.

**7.19.2.12 uint32 sample17\_ttypedef\_struct\_type::flow\_label**

Flow label.

**7.19.2.13 uint8 sample17\_ttypedef\_struct\_type::next\_hdr\_prot**

Transport-level protocol header.

**7.19.2.14 union { ... } sample17\_ttypedef\_struct\_type::sample17\_union\_member1**

Sample 17 union member 1 of typedef struct.

**7.19.2.15 npfltr\_tcp\_hdr\_field\_mask\_type sample17\_ttypedef\_struct\_type::field\_mask**

In mask.

**7.19.2.16 npfltr\_tcp\_hdr\_field\_mask\_type sample17\_ttypedef\_struct\_type::err\_mask**

Out mask.

**7.19.2.17 uint16 sample17\_ttypedef\_struct\_type::port**

NP2-NP4 source and destination port.

**7.19.2.18 uint16 sample17\_ttypedef\_struct\_type::range**

Range of the source and destination port for NP2-NP4 and UDP.

**7.19.2.19 npfltr\_udp\_hdr\_field\_mask\_type sample17\_ttypedef\_struct\_type::field\_mask**

In mask.

**7.19.2.20 npfltr\_udp\_hdr\_field\_mask\_type sample17\_ttypedef\_struct\_type::err\_mask**

Out mask.

**7.19.2.21 npfltr\_icmp\_hdr\_field\_mask\_type sample17\_ttypedef\_struct\_type::field\_mask**

In mask.

**7.19.2.22 npfltr\_icmp\_hdr\_field\_mask\_type sample17\_typedef\_struct\_type::err\_mask**

Out mask.

**7.19.2.23 uint8 sample17\_typedef\_struct\_type::type**

NP5 type.

**7.19.2.24 uint8 sample17\_typedef\_struct\_type::code**

NP5 code.

**7.19.2.25 npfltr\_esp\_hdr\_field\_mask\_type sample17\_typedef\_struct\_type::field\_mask**

In mask.

**7.19.2.26 npfltr\_esp\_hdr\_field\_mask\_type sample17\_typedef\_struct\_type::err\_mask**

Out mask.

**7.19.2.27 uint32 sample17\_typedef\_struct\_type::spi**

Secure index.

**7.19.2.28 npfltr\_tcp\_udp\_hdr\_field\_mask\_type sample17\_typedef\_struct\_type::field\_mask**

In mask.

**7.19.2.29 npfltr\_tcp\_udp\_hdr\_field\_mask\_type sample17\_typedef\_struct\_type::err\_mask**

Out mask.

**7.19.2.30 union { ... } sample17\_typedef\_struct\_type::sample17\_union\_member2**

Sample 17 union member 2 of typedef struct.

**7.19.2.31 uint16 sample17\_typedef\_struct\_type::fi\_id**

Filter ID.

**7.19.2.32 uint16 sample17\_typedef\_struct\_type::fi\_precedence**

Filter precedence.

### 7.19.2.33 `struct { ... } sample17_typedef_struct_type::sample17_struct_member1_of_typedef_struct_type`

Sample 17 struct member 1 of typedef struct.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.20 `sample1_simple_struct_s` Struct Reference

### Data Fields

- `uint8 length`
- `uint8 ccp [SS_MAX_LEN]`

#### 7.20.1 Detailed Description

Sample 1 simple struct with two members. If the brief description requires more than one sentence, it must follow the first sentence with no carriage return. If there is more information provided (more than one paragraph) for this struct, Doxygen will include with the struct's brief description, the word "more..." as a link to the additional information in the paragraph for the struct. This is an example of how to use a superscripted asterisk\* in Doxygen markup.

The detailed description of the struct will be included as a lead-in paragraph to the struct's Data Fields unnumbered heading. This detailed description must be separated from the brief description for Doxygen to place this paragraph with the struct in the body of the document as shown in this example.

If a second paragraph for the detailed description is required, it must be separated from the first paragraph with a carriage return as shown here.

#### 7.20.2 Field Documentation

##### 7.20.2.1 `uint8 sample1_simple_struct_s::length`

Sample 1 simple struct member 1.

##### 7.20.2.2 `uint8 sample1_simple_struct_s::ccp[SS_MAX_LEN]`

Sample 1 simple struct member 2.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.21 sample2\_parent\_struct\_with\_members\_child\_struct\_as\_member Struct Reference

### Data Structures

- struct [child\\_struct\\_member](#)

### Data Fields

- int [x](#)
- int [y](#)
- struct [sample2\\_parent\\_struct\\_with\\_members\\_child\\_struct\\_as\\_member::child\\_struct\\_member](#) s

#### 7.21.1 Detailed Description

Sample 2 struct (parent struct) with a struct member (child struct).

The brief description (in the first paragraph) and the detailed description of the struct will be included as a lead-in paragraph to the struct's Data Fields unnumbered heading. This detailed description must be separated from the brief description for Doxygen to place this paragraph with the struct in the body of the document as shown in this example.

#### Note

Notice that the placement of the comment for the child struct must be inside the parent struct's closing brace to properly appear in the PDF (Need to add this change to the Rev D list). Also note that the [child\\_struct\\_member](#) info is not included in the PDF under the parent struct info, but appears later in the PDF on page 22. Dimitri is fixing this as part of SOW task 2a.

#### 7.21.2 Field Documentation

##### 7.21.2.1 int sample2\_parent\_struct\_with\_members\_child\_struct\_as\_member::x

Integer x in parent struct.

##### 7.21.2.2 int sample2\_parent\_struct\_with\_members\_child\_struct\_as\_member::y

Integer y in parent struct.

##### 7.21.2.3 struct sample2\_parent\_struct\_with\_members\_child\_struct\_as\_member::child\_struct\_member sample2\_parent\_struct\_with\_members\_child\_struct\_as\_member::s

Sample 2 child struct member.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.22 sample2\_parent\_struct\_with\_members\_child\_struct\_as\_member:-:child\_struct\_member Struct Reference

### Data Fields

- int [x1](#)
- int [y1](#)

### 7.22.1 Field Documentation

#### 7.22.1.1 int sample2\_parent\_struct\_with\_members\_child\_struct\_as\_member::child\_struct\_member::x1

Integer x1 in child struct.

#### 7.22.1.2 int sample2\_parent\_struct\_with\_members\_child\_struct\_as\_member::child\_struct\_member::y1

Integer y1 in child struct.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.23 sample3\_struct\_with\_two\_members\_and\_declared\_as\_variable Struct Reference

### Data Fields

- struct [StructChildMember StructChildMember](#)
- SResult(\* [FCN\\_0](#))(uint32 leb\_idx, SDeviceHandle \*h, uint32 u1)
- SResult(\* [FCN\\_1](#))(uint32 leb\_idx, SDeviceHandle \*h, uint32 u1, uint32 u2)

### 7.23.1 Detailed Description

Sample 3 struct with a different construction, which includes a struct member with two members. In this example, the second usage of the struct name denotes that a variable of the same name will be created.

### 7.23.2 Field Documentation

#### 7.23.2.1 struct StructChildMember sample3\_struct\_with\_two\_members\_and\_declared\_as\_variable::StructChildMember

Sample 3 struct with two struct members and struct declared as variable.

### 7.23.2.2 SResult(\* sample3\_struct\_with\_two\_members\_and\_declared\_as\_variable::FCN\_0)(uint32 leb\_idx, SDeviceHandle \*h, uint32 u1)

Sample 3 struct member 1.

### 7.23.2.3 SResult(\* sample3\_struct\_with\_two\_members\_and\_declared\_as\_variable::FCN\_1)(uint32 leb\_idx, SDeviceHandle \*h, uint32 u1, uint32 u2)

Sample 3 struct member 2.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.24 sample4\_struct\_with\_typedef\_struct\_member Struct Reference

### Public Types

- typedef struct sample4\_typedef\_member\_type [sample4\\_typedef\\_member](#)

### Data Fields

- int [a](#)
- int [b](#)

### 7.24.1 Detailed Description

Sample 4 struct with a typedef struct member.

### 7.24.2 Member Typedef Documentation

#### 7.24.2.1 typedef struct sample4\_typedef\_member\_type sample4\_struct\_with\_typedef\_struct\_member::sample4\_typedef\_member

Sample 4 struct member 1.

### 7.24.3 Field Documentation

#### 7.24.3.1 int sample4\_struct\_with\_typedef\_struct\_member::a

Sample 4 struct member 2.

### 7.24.3.2 int sample4\_struct\_with\_typedef\_struct\_member::b

Sample 4 struct member 3.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.25 sample5\_struct\_with\_define\_member Struct Reference

### Data Fields

- int [a](#)
- int [b](#)
- uint8\_t [number](#)

### Related Functions

(Note that these are not member functions.)

- #define [SAMPLE\\_DEFINE\\_INSIDE\\_A\\_STRUCT](#)

### 7.25.1 Detailed Description

Sample 5 struct with a define member. Note that in order to include the information for the define member, one must use the as shown below. Also note that Doxygen will list the items first under separate section entitled "Friends And Related Function Documentation". A [related] tag is also placed next to its title.

### 7.25.2 Friends And Related Function Documentation

#### 7.25.2.1 #define SAMPLE\_DEFINE\_INSIDE\_A\_STRUCT [related]

Sample 5 struct member 3.

### 7.25.3 Field Documentation

#### 7.25.3.1 int sample5\_struct\_with\_define\_member::a

Sample 5 struct member 1.

#### 7.25.3.2 int sample5\_struct\_with\_define\_member::b

Sample 5 struct member 2.

### 7.25.3.3 uint8\_t sample5\_struct\_with\_define\_member::number

Sample 5 struct member 4.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

## 7.26 sample6\_interface\_desc\_t Struct Reference

### Data Fields

- if\_control\_msg\_fn [control\\_msg](#)
- alt\_interface\_desc\_t \* [alt\\_ifs](#)
- uint8\_t [alt\\_if\\_num](#)
- uint8\_t [alt\\_if\\_curr](#)
- uint8\_t \* [extra\\_descriptor](#)
- uint32\_t [extra\\_descriptor\\_size](#)
- uint8\_t [number](#)
- uint8\_t [if\\_class](#)
- uint8\_t [if\\_subclass](#)
- uint8\_t [if\\_protocol](#)
- uint8\_t [if\\_string](#)

### Related Functions

(Note that these are not member functions.)

- #define [UWD\\_UNDEFINED\\_INTERFACE](#)

### 7.26.1 Detailed Description

Sample 6 struct. Interface descriptor structure.

### 7.26.2 Friends And Related Function Documentation

#### 7.26.2.1 #define UWD\_UNDEFINED\_INTERFACE [related]

Sample 6 struct member 7 with value (0xFF).

### 7.26.3 Field Documentation

#### 7.26.3.1 `if_control_msg_fn sample6_interface_desc_t::control_msg`

Sample 6 struct member 1.

#### 7.26.3.2 `alt_interface_desc_t* sample6_interface_desc_t::alt_ifs`

Sample 6 struct member 2.

#### 7.26.3.3 `uint8_t sample6_interface_desc_t::alt_if_num`

Sample 6 struct member 3.

#### 7.26.3.4 `uint8_t sample6_interface_desc_t::alt_if_curr`

Sample 6 struct member 4.

#### 7.26.3.5 `uint8_t* sample6_interface_desc_t::extra_descriptor`

Sample 6 struct member 5.

#### 7.26.3.6 `uint32_t sample6_interface_desc_t::extra_descriptor_size`

Sample 6 struct member 6.

#### 7.26.3.7 `uint8_t sample6_interface_desc_t::number`

Sample 6 struct member 8.

#### 7.26.3.8 `uint8_t sample6_interface_desc_t::if_class`

Sample 6 struct member 9.

#### 7.26.3.9 `uint8_t sample6_interface_desc_t::if_subclass`

Sample 6 struct member 10.

#### 7.26.3.10 `uint8_t sample6_interface_desc_t::if_protocol`

Sample 6 struct member 11.

### 7.26.3.11 `uint8_t sample6_interface_desc_t::if_string`

Sample 6 struct member 12.

The documentation for this struct was generated from the following file:

- `SampleHeaderFile1_multigroups_C.h`

## 7.27 `sample7_struct_with_verbatim_comment_t` Struct Reference

### Data Fields

- `uint32_t * buffer`
- `uint32_t buffer_size`
- `const uint8_t * pbuf`
- `uint32_t * ret_total_size`

### 7.27.1 Detailed Description

Sample 7 struct with verbatim comment block.

### 7.27.2 Field Documentation

#### 7.27.2.1 `uint32_t* sample7_struct_with_verbatim_comment_t::buffer`

Sample 7 struct member 1. {14}

```

<----- 32 bits ----->
-----
| vsc vs handle 1 |
-----
| vsc vs handle 2 |
-----
| vsc vs handle 3 |
-----
| vsc vs handle 4 |
-----
.
.

```

#### 7.27.2.2 `uint32_t sample7_struct_with_verbatim_comment_t::buffer_size`

Sample 7 struct member 2.

**7.27.2.3 const uint8\_t\* sample7\_struct\_with\_verbatim\_comment\_t::pbuf**

Sample 7 struct member 3.

**7.27.2.4 uint32\_t\* sample7\_struct\_with\_verbatim\_comment\_t::ret\_total\_size**

Sample 7 struct member 4.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

**7.28 sample8\_struct\_with\_union\_member\_t Struct Reference****Data Fields**

- uint32\_t [open\\_id](#)
- char \* [Data](#)
- union {
  - swu\_vs\_open\_full\_control\_t [full\\_control](#)
  - swu\_vs\_open\_passive\_control\_t [passive\\_control](#)
- } [u](#)

**7.28.1 Detailed Description**

Sample 8 struct with a union member that has members. Note that the comment for the union does not show up in PDF. Dimitri fixing as part of SOW task. Also note that when a data structure (struct, typedef, union, class) are used as members, do not include the brief command in their comment - need to add this change to the Rev D list.

**7.28.2 Field Documentation****7.28.2.1 uint32\_t sample8\_struct\_with\_union\_member\_t::open\_id**

Sample 8 struct member 1:

- #SWU\_VS\_OPENID
- #SWU\_VS\_CLOSEID

**7.28.2.2 char\* sample8\_struct\_with\_union\_member\_t::Data**

Sample 8 struct member 2.

**7.28.2.3 swu\_vs\_open\_full\_control\_t sample8\_struct\_with\_union\_member\_t::full\_control**

Sample 8 struct union member 1. This allows data to be exchanged across SWU controls.

**7.28.2.4 swu\_vs\_open\_passive\_control\_t sample8\_struct\_with\_union\_member\_t::passive\_control**

Sample 8 struct union member 2. This allows data to be exchanged to manage SWU passive controls.

**7.28.2.5 union { ... } sample8\_struct\_with\_union\_member\_t::u**

Sample8 union with members inside a struct.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

**7.29 sample9\_struct\_sus\_ad\_pp\_eq Struct Reference****Data Fields**

- uint32\_t [param\\_id](#)
- union {
  - struct sus\_aud\_pp\_eq\_enable [enable](#)
 } [u](#)

**7.29.1 Detailed Description**

Sample 9 struct with a union member that has a struct member.

**7.29.2 Field Documentation****7.29.2.1 uint32\_t sample9\_struct\_sus\_ad\_pp\_eq::param\_id**

Sample 9 struct member 1.

**7.29.2.2 struct sus\_aud\_pp\_eq\_enable sample9\_struct\_sus\_ad\_pp\_eq::enable**

Sample 9 struct union member 1.

**7.29.2.3 union { ... } sample9\_struct\_sus\_ad\_pp\_eq::u**

Sample 9 struct member 2.

The documentation for this struct was generated from the following file:

- SampleHeaderFile1\_multigroups\_C.h

# 8 Example Documentation

---

## 8.1 fancy\_report\_event\_example.c

This is an example of how the example feature works.

# A Band Classes

---

Table A-1 lists the access technology and band class values used in this document.

**Table A-1 Band class access technology and values**

<b>Value</b>	<b>Access technology</b>	<b>Band class</b>
0	BAND	BC_0
1	BAND	BC_1
2	BAND	Reserved

# B More Band Classes

---

Table B-1 lists the access technology and band class values used in this document.

**Table B-1 More band class access technology and values**

<b>Value</b>	<b>Access technology</b>	<b>More band classes</b>
0	BAND	BC_10
1	BAND	BC_11
2	BAND	Reserved
3	BAND	BC_13
4	BAND	BC_14
5	BAND	BC_15
6	BAND	BC_16
7	BAND	BC_17
8	BAND	BC_18
9	BAND	BC_19
10	BAND	BC_110
11	BAND	BC_111
